YOUR ASSET. OUR PROTECTION.

*Keep your assets under control.  
Inatex provides expert asset protection services to ensure that you maintain plant safety, avoid unplanned down time and comply with increasingly complex regulatory requirements*

## HAZARDOUS AREA INSPECTION.

### Inatex is a specialist provider of inspection services to industry.

Inatex performs hazardous area verification and inspection services during construction, and provides support to plant operations by planning, managing and performing inspections as part of ongoing maintenance programmes.

Owners and operators of facilities which incorporate areas classified as Hazardous are required to demonstrate compliance to a stringent regulatory framework which is becoming increasingly complex.

Equipment installed in classified hazardous areas must be inspected in detail after installation, and thereafter at suitable intervals during the life of the asset. Importantly, persons conducting Hazardous Area inspections must be competent and appropriately trained to do so.

Inatex specialises in the provision of independent, expert teams for the management and execution of Hazardous Area inspections, either as part of a capital project or during operations as part of an asset maintenance program.

Ongoing inspection during operations is important in order to monitor the effects of deterioration and change; ensuring ongoing legal and regulatory compliance, plant safety and operational integrity.

Armed with our cloud based CONNECT® inspection system on IECEx certified tablets, our personnel keep you informed every step of the way, with progress updates and instant reporting formatted to your requirements; online and available to you 24x7. The Verification Dossier is maintained and defects or non-conformances are reported instantly. Detailed information can be passed to your maintenance system for action, delivered by email or accessed directly within CONNECT®. Programme management and inspection scheduling is simplified.

Inatex provides inspection of Hazardous Areas to the requirements of AS/NZS 60079, IEC 60079, EN 60079 and equivalents. Our services are delivered via:

- ❖ Integrated, self-managed teams for Hazardous Area inspection during plant construction and commissioning,
- ❖ Integrated, self-managed teams for ongoing visual, close, detailed or continuous Hazardous Area inspections as part of an ongoing maintenance programme, or
- ❖ Supply of qualified Hazardous Area inspection personnel for integration into your own team under your management.

Inatex has significant experience in the provision of services to clients in the Oil & Gas and Mining industries, particularly those operating in remote locations worldwide and on offshore oil and gas drilling and production facilities. We also operate in the shipyards supplying the oil and gas industry in South Korea and China.

From our base in Perth, Western Australia and with offices in major regional industry centres, Inatex has the resources and experience to support your business, wherever your assets are located.
